

# Control ID

Control ID, our technology automatically recognizes about 2,500 Identity Documents such as passports, visas, driver's licenses and many other types of identity documents from all over the world. It extracts all biometric and alphanumeric data contained in the document, and authenticates the documents using proprietary document forensics.

Control ID is available in a variety of product editions from a basic Data Capture package to a high-security Document Authentication.

## MAIN OPTIONS

### Data Capture

Capture data by reading demographical information only. Typical used to streamline workflow, build databases and CRM systems.

### Verification

Capture data by reading demographical information in addition to checking formats and several security items. Uses vary across many commercial organizations – from validating new customers and employees to meeting compliance requirements and other aspects of fraud detection.

### Authentication

Offer the highest level of security by reading demographical information and checking all security items and formats. Users include commercial organizations from banks to retail establishments as well as organizations with the highest level of security needs such as critical infrastructures and government facilities.

### Advantages:

- Quickly and accurately identifies fraudulent ID's
- Operates using the most extensive and intelligent document library in the industry – currently supports about 2 500 document types
- Helps organizations meet compliance requirements
- Protects customers personally identifiable information
- Bundles with numerous types of scanners
