

# Form Filling Software

Our software brings great acceleration on the process, but also eliminates the risk of errors in data entry inserted by human factor. Software for recording data to your application increases safety in combination with any of selected hardware and allows detection of counterfeit of an identity of document. Automatically enables AGE controls, archiving, data on visitors, fully meets recording of betting by means of legal provisions, against money laundering, activities in casinos, amusement arcades. DPWrite is fully compatible with any software run on Windows. In connection with our OCR document reader can read data zone pass, ID card or other personal documents. Electronically readable and automatically inserted required data in electronic form.

## Benefits:

- Allows entry into any application running under a Windows user-friendly application
- Ability to define data entry different ways in different windows applications
- Application simulates keyboard entry of data-in other words. The system "thinks" it that quickly written on keyboard.
- Automatically moving the window between the fields: tab, enter, space, possibility to define new user keys
- On-line control of stolen, lost identity cards and passports in the database and the Ministry of Interior Czech republic and Slovak republic
- Age control
